RecruitmentAds.com Subprocessor List

Feature-based subprocessor overview

Last updated: 22 June 2026

This Subprocessor List describes the main third-party providers used by RecruitmentAds.com in connection with the Services. Not every provider is used for every customer project. The providers involved depend on the features selected by the Customer.

Controller and processor questions can be sent to privacy@recruitmentads.com. Support questions can be sent to support@recruitmentads.com.

Provider	Purpose / feature	Data processed	Location / transfer position	Training position	Retention notes
Amazon Web Services, AWS	Media/renders storage and infrastructure	Uploaded media, generated media, renders, related storage metadata	AWS eu-west-1, Ireland	No training use	Active storage according to Customer use; backups/logs up to 90 days
Supabase	Authentication and database	User accounts, authentication data, workspace/project database records	EU, Frankfurt, eu-central-1	No training use	Retained during account/project life; deletion and backup rotation apply
EU VPS infrastructure, RunCloud-managed	Templates, metadata and job-agent app hosting	Templates, app metadata and operational files	EU-based VPS, exact datacenter available on request	No training use	Retained during service operation; deletion and backup rotation apply
Cloudflare	DNS, CDN, network security and performance	IP addresses, request metadata, cacheable assets where applicable	Global network, subject to Cloudflare terms	No training use	According to Cloudflare service settings and logs
OpenAI API	Text processing, prompt generation, content analysis, possible image analysis where selected	Vacancy text, prompts, instructions, generated text, image inputs if feature requires this	May involve non-EEA processing depending on configuration	Supplier does not train; API/business configuration intended to prevent third-party training unless opted in	Provider logs/abuse monitoring may apply according to OpenAI terms and settings
Google Gemini / Imagen, paid API	Text/image processing, analysis, generation and quality checks	Vacancy text, prompts, instructions, images where feature requires this, generated output	Google infrastructure, may involve non-EEA processing depending on configuration	Paid API configuration intended to prevent use for model training without permission	According to Google paid API/cloud terms and settings
fal.ai	Technical layer for AI image and video generation workflows	Prompts, source media, generation settings and generated output where feature requires this	May involve non-EEA processing and onward processing by underlying model providers	Supplier does not train; fal and underlying model terms apply	Default payload retention may apply, currently expected to be up to approximately 30 days unless storage is disabled or deletion controls are applied
Kling, via fal.ai	Underlying video generation model	Prompts, source image/video and generated video output	Via fal.ai and underlying provider infrastructure	Subject to fal.ai and underlying provider terms	Subject to fal.ai and underlying provider terms
Seedance, via fal.ai	Underlying video generation model	Prompts, source image/video and generated video output	Via fal.ai and underlying provider infrastructure	Subject to fal.ai and underlying provider terms	Subject to fal.ai and underlying provider terms
Happy Horse, via fal.ai	Underlying image-to-video model, model id alibaba/happy-horse/image-to-video	Prompts, source image/video and generated video output	Via fal.ai and underlying provider infrastructure	Subject to fal.ai and underlying provider terms	Subject to fal.ai and underlying provider terms
ElevenLabs	Voice-over generation	Text scripts, language/voice settings, generated audio	Provider infrastructure, may involve non-EEA processing	Supplier does not train; provider terms/ settings apply	According to ElevenLabs terms and account settings
Stripe	Payments, checkout, credits and webhooks	Billing contact data, payment metadata, transaction identifiers, subscription or credit information	Provider infrastructure, may involve non-EEA processing	No training use	According to Stripe legal and retention requirements
Resend	Transactional email, including password resets	Email address, transactional email content and delivery metadata	Provider infrastructure, may involve non-EEA processing	No training use	According to Resend terms and delivery/log retention settings
Google Workspace / Gmail	Support and privacy inboxes	Support messages, contact details and related communication metadata	Google infrastructure, may involve non-EEA processing	No training use for Customer Data by Supplier	According to Google Workspace terms and mailbox retention
Firecrawl	Website/job URL retrieval and parsing	Customer-provided URLs, webpage content, public job listing content and extracted text	Provider infrastructure, may involve non-EEA processing	No training use by Supplier	According to Firecrawl terms and settings

Provider	Purpose / feature	Data processed	Location / transfer position	Training position	Retention notes
Brandfetch	Brand asset lookup	Company domain, public brand assets, logo and brand metadata	Provider infrastructure, may involve non-EEA processing	No training use by Supplier	According to Brandfetch terms and settings
Logodog	Logo and brand asset retrieval	Company domain, public logo and brand metadata	Provider infrastructure, may involve non-EEA processing	No training use by Supplier	According to Logodog terms and settings

Feature dependency

- Storing uploaded media in a workspace does not by itself require external AI model processing.
- Rendering customer-provided media into a template does not by itself require external AI model processing.
- Text generation, caption generation, translation and prompt generation may involve OpenAI API or Google Gemini.
- Image analysis or image generation may involve OpenAI API, Google Gemini / Imagen, fal.ai or another selected feature provider.
- Image-to-video or video generation may involve fal.ai and an underlying video model provider such as Kling, Seedance or Happy Horse.
- Voice-over generation may involve ElevenLabs.
- Once a Customer downloads or publishes output to external platforms, those external platforms process the content under their own terms.
